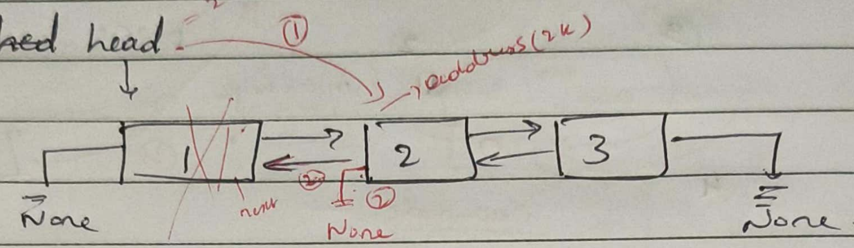
13 Doubly linked list in python - Delete

* Delete Node DLL @ Beginning & End :-

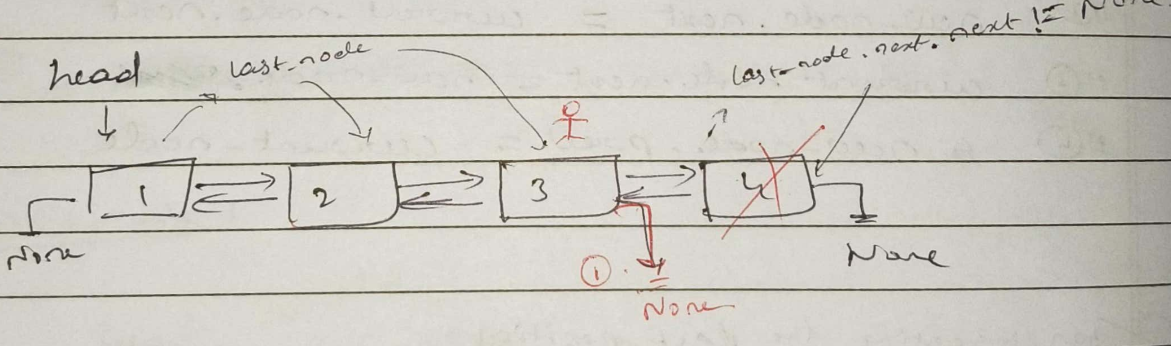
@ Beginning

→ head = head.next
head.prev = None.

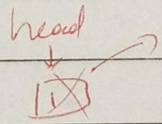


#1) Empty list
#2) Single Node → empty list
#3) Node greater than 1.

@ End :-



for 1 Node =>



head = None.

```python
class DLL:

    def delete_at_beginning(self):
        # list empty
        if self.head is None:
            print("list is empty")
            return

        # one node
        if self.head.next is None:
            self.head = None
            return

        # 2 or more nodes

        self.head = self.head.next
        self.head.prev = None

    def delete_at_end(self):
        # list empty
        if self.head is None:
            print("list is empty")
            return
        # one Node
        if self.head.next is None:
            self.head = None
            return

        # 2 or more nodes
        current_node = self.head

        while current_node.next is not None:
            current_node = current_node.next

        current_node.prev.next = None
