

13 Singly linked list in python - Insert at the End

① Empty list

② only one node ::

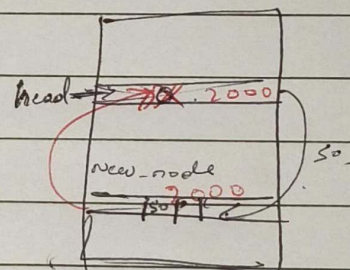

③ 2 or more ::

① head == None

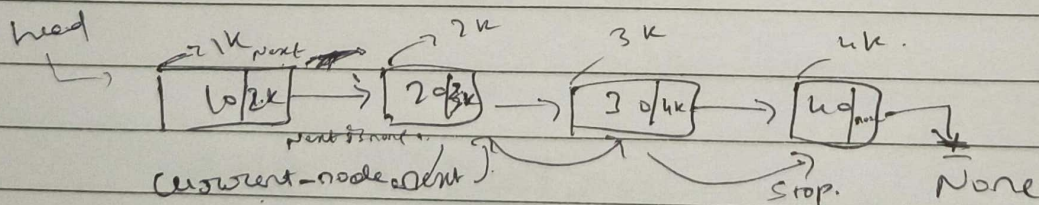

head = new-node

② head.next == None

head.next = new-node

② current-node.next != None

current-node.next = current-node.next

```
6 class SinglyLinkedList:
10     def insert_at_end(self,data):
11         new_node = Node(data)
12
13         # check is list empty
14         if self.head is None:
15             self.head = new_node
16             return
17
18         # for 1 node
19         if self.head.next is None:
